

'Smarter... Greener...Safer...' ACTIVITIES IN NOKIA, Finland

A LECTURE BY A RENOWNED FUTURE RESEARCHER ILKKA HALAVA

All teachers in Nokia started their school year with a lecture from a famous Finnish future researcher, Ilkka Halava. He talked about the ongoing changes in the professional work life and the changes needed in the educational field. Teachers continued the work in their own schools in the afternoon and made plans how to include entrepreneurial skills of the future in their teaching in practice.

In our school 8th graders' teachers planned a theme week including different subjects. During this week all 8th graders visited at least one company either in Nokia or in closeby municipalities and covered the theme of future worklife skills in different ways in different subjects. They also attended a lecture from a prize winning IT-company worker.
